**ADMISSION NOTE**

**IDENTIFYING DATA:**

Name:                      Age:                      years old                      Race :  
Marital status: married                      Sex(     )                      Occupation :  
Date of admission:                      Chart No:

**CHIEF COMPLAINT:**

Lower abdominal pain during menstruation with heavy menstruation in recent years.

20mm

**SENT ILLNESS:**

According to the statement of patient herself, she was rather well before. In recent years, heavy menstruation with low abdominal pain was noted. She did not pay the tension and regularly follow up at GYN OPD. Last month, severe dysmenorrhea and heavy menstruation was noted, so she went to our ER for help and visited our OPD for further evaluation. Sonogram showed uterus 95x59x69 mm with adenomyosis appearance, LO 27x25x27 mm, RO 26x24x23 mm. Under the impression of adenomyosis with dysmenorrhea and menorrhagia, she was admitted for further evaluation and management.

Throughout the whole course, there was no fever, no chill, no other special medical condition, xcept dysmenorrhea and menorrhagia were noted.

**PAST HISTORY:**

- 1. Denied any systemic disease, such as DM or H/T.
- 2. Previous history of operation: S/p Laparoscopic Appendectomy + D&C on 93-01-21.
